

Proposed clinician workflow: screening + counterfactual review

A proposed decision-support use of this pipeline, not a validated or deployed clinical protocol (see Discussion, Limitations)

Decision support only, not an automated diagnosis

The risk score and counterfactual are inputs to clinical judgment: the referral and treatment decision remains the clinician's.

This pipeline is a proof-of-concept research tool, trained on a single-clinic cohort (n=187) with no external validation or prospective testing to date; it has not been deployed in clinical practice (Discussion, Section on Limitations).
